

TOP 5 LANDSCAPE APPS YOU MUST HAVE

These smartphone apps will quickly change the way you garden and make your next landscaping project easier.

TOP 5 LANDSCAPE APPS YOU MUST HAVE

ISCAPE APPS

iScape's user friendly technology provides easy-to-use virtual design tools so you can portray your vision at ease. With a mobile garden and landscape design app you can eliminate all the guesswork and confusion – which in return – will save you valuable time and money.

FOOLPROOF PLANTS FOR SMALL GARDENS

This app has detailed information on more than 90 plants perfect for small spaces. You'll be able to pick the perfect plants for your climate zone and get step-by-step guides on planting and even much more (like how to lay down mulch).

SPROUT IT

Sprout It has it all... plant guides to help you pick what to grow, step-by-step growing instructions, cooking and recipe ideas for your crops, and ideas for different types of garden projects. It even works with your local weather information and sends you reminders about planting and watering.

HOMEGROWN

One of the hardest things about gardening is keeping track of when you watered what, and how fast certain things should be growing. Homegrown acts as a mobile diary where you can add notes and photos of everything you've done. Make note when you feed or water certain plants or when you see pests. Read helpful tips on how to garden and get advice on why types of vegetables to grow. Take photos of your garden for progress updates.

GARDEN TIME PLANNER

Create a garden, add the plants you have planted or want to plant and let the app help you with the rest. It will give you a check list for how to care for each plant and you can check tasks off as you complete them. Also get general information on certain vegetables, flowers and herbs. You can add as many gardens as you want, and Garden Time Planner will make different lists for each so you are always on top of everything. Check the weather to see when you need to water everything.
